Wash Systems: Drums

UBI Systems

This is an automated wash system, high pressure low flow, a very efficient wash

Wash Systems: Drums Operation

- The operator places the drum in position held in position by a mechanical holder.
- A sensor detects the drum in position. The drum is inclined at 15° to facilitate drainage. The slope facilitates the introduction of the drum
- The door is closed manually.
- The operator selects one of the pre-programmed washes (2 selections)
- Operators press start cycle.
- At completion of the cycle a light flashing, the drum is ready for removal.
